

Abstract

The intension of this project is to provide previous year question paper of both UG and PG computer science department which includes BCA, BSC, MCA, MSC of last 3 years under different university and autonomous college. It is easy for teachers to create exam question paper with the help of previous year question paper and the already created question here according with each syllabus. The most important of this system is that teachers can select each question and convert them as new question paper.

In this system we allow both student and teacher to view the question paper of each subject differently under each semester, study material, previous year lab question, project topic and there abstract, exam notification, and it allows open course selection.

This system consists of three modules Admin, Student and Teacher. Admin the cardinal personality of the whole system. Student can register themselves and also teacher can login to the system.

An examination is an important activity and more important and challenging is preparing exam question paper which is very tedious and time consuming process for the instructor. So to reduce the work load of the instructor this method is proposed. The previous year question paper helps the students understand the exam form and pattern better.
